

Assess and tune your security solutions for optimal performance and reduced risk

The customer's challenge

The American Brokerage and Banking Company already had Symantec Data Loss Prevention (DLP) installed, but it wasn't running properly. The company was receiving hundreds of false positives a day that led to wasted time and reports that didn't reflect the latest security trends.

Getting DLP fully deployed and tuning it to run optimally can be a daunting task. Understanding and setting up effective monitoring can be overwhelming without the right security experts to help walk you through the steps. DataEndure offered the expertise and know-how to help the American Brokerage and Banking Company get their DLP solution up to speed to help save the company time, eliminate false positives, and protect their reputation with a more thorough and up-to-date report.

How DataEndure helped

DataEndure employees have deep knowledge of Symantec products, and that knowledge helps our customers run their solutions in the best ways possible. After checking on the DLP solution, DataEndure discovered that the customer had too many policies and false positives that were contributing to monitoring alert overload. The number of alerts coming in was too high to realistically deal with, and the company didn't have a complete view of their security environment.

DataEndure ran a policy assessment and tuning engagement to help remediate these issues. With our knowledge of Symantec DLP, we were able to rewrite policies in the solution to better reflect what the company cares about when it comes to security. This took the daunting task of deploying and tuning the DLP solution off the customer's shoulders.

CHALLENGE

DLP was already installed but was creating hundreds of false positives and was not reporting properly on the company's data.

APPROACH

DataEndure offered a policy assessment and tuning engagement to help tune the DLP solution and make sure it was running properly.

BENEFITS

- Elimination of false positives
- New policies to reflect what the security executives care about today
- Better view of the data, where it's stored, and if it's secure

How did the customer benefit?

By partnering with DataEndure, the American Brokerage and Banking Company was able to eliminate the false positives that were overloading their DLP solution. These false positives were wasting time and money and creating an obscured view of the security environment.

DataEndure employees have the knowledge and expertise to make sure your solutions are performing at their peak capacity. The American Brokerage and Banking Company already had DLP installed but wasn't using the solution correctly, leading to wasted time and money. After DataEndure eliminated the false positives and rewrote the company's policies, the company able to gain a better understanding of their environment. Their policies now reflect what current security executives care about today, and not what was thought to be relevant years ago.

Ability to see where sensitive data is stored and confirm that it's secure and handled correctly by employees

Elimination of false positives leading to increased efficiency

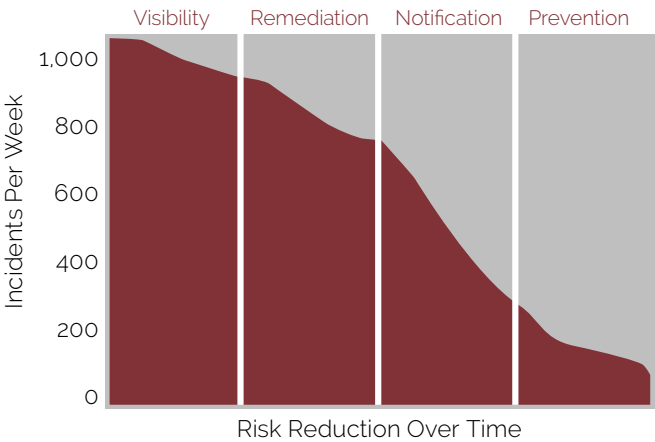

Better reputation protection with the assurance that only real threats are being handled

Make sure your solutions are running optimally

DataEndure's diagnostics, policy assessment, and tuning engagement brought the solution up-to-date and ensured a better security solution for the company. DataEndure works across storage, information management, security, and datacenter infrastructure and can make sure your solutions are running optimally as well.

Enable continuous risk reduction with Symantec DLP

Symantec DLP offers a comprehensive workflow to help reduce risk across departments. DLP delivers the highest level of risk reduction and helps security teams enable the business side by educating employees, fixing broken business processes, and supporting business activity to occur securely.

	Right Automation	Resolution, Enforcement, Notification
	Right Person	Route Incidents to Right Responder
	Right Order	High Severity of Incidents First
	Right Information	5-Second Test
	Right Action	1-Click Response
	Right Metrics	Prove Results to Execs and Auditors

How can you experience the same benefits?

If you're interested in what DataEndure can do for you, give us a call at **1-800-969-4268** and see how our relationships with the right vendors and knowledge of cutting-edge technology can help you meet your goals and more.

DataEndure helps companies build digital resilience so that their critical information assets are protected and available to the right people, at the right time. We take a holistic approach in architecting and delivering a data management and protection strategy designed to simplify enterprise environments and accomplish specific customer goals.
